### (54) Repository and monitoring system therefor

(57) A repository including: an input unit (3) for setting the temperature of the interior (2) of a repository (1); a measuring unit (5,6) for measuring the temperature of the interior of the repository (1); a controller (4) for holding ID data to specify the repository itself and communicatively outputting the measurement data to the external; and an auxiliary power source (13) for communicating the measurement data to the external even during interruption of power supply. A central controller 11 for collecting the measured data from each repository and judging whether abnormality occurs or not is connected to plural repositories to fabricate a monitoring system. When abnormality is detected, the measured data as well as ID data and time data are transmitted to a user through the Internet.
